

1535,KNF=9 Knob half-cylinder

Mechanical locking cylinders

Special knob cylinder

Locking function on one side with knob

Locking cylinders form the core element of secure locking systems and represent IKON's core competency. The product range meets challenging security requirements with sophisticated solutions. High-quality IKON locking cylinders provide high protection against intruders. Standard equipment in this respect includes anti-drilling devices, security cards and panic functions. Patented profiles are a direct result of decades of experience gained in precision engineering and are effectively equipped against even the latest intrusion or burglary techniques. These features include innovative VECTOR profiles and the IKON reversible key profile WSW-W10.

Area of Application

Knob cylinders are often used in building side entrances which are not intended to be opened or entered from the outside. However, it should be possible to retrofit the doors at a later date by simply changing the cylinder so that they can then be opened from both sides. The knob on the inside is used to close the door easily, which means no key is needed for the inside. IKON supplies different knob designs, from a knurled knob through to a recessed grip knob. Due to the nature of their design, knob cylinders are particularly easy to use by old and young alike.
