

3143 Compact rim lock

Locks and locking systems with cross profile

Rim locks

6-pin cross profile security lock

As variants of IKON pin cylinder systems, cross profiles provide security in the smallest of spaces. Rows of pins on three corresponding sides with minimal installation dimensions provide effective protection against manipulation. Cross profile locks are also available on request with a special paracentric profile. Suitable keys for concealed installation are available in different lengths from IKON.

Area of Application

The rim lock provides unobtrusive yet effective protection due to its extremely compact shape. It is suitable for every type of door and window, patio and balcony door. Neither the fixing screws, nor the lock or the lock case can be reached from the outside. The 10mm thick hardened steel bolt that projects 20mm deep into the lock case provides a high degree of security.
