

3376 Security lock with cross profile

Locks and locking systems with cross profile

Security locks with cross profile

9-pin cross profile security lock

As variants of IKON pin cylinder systems, cross profiles provide security in the smallest of spaces. Rows of pins on three corresponding sides with minimal installation dimensions provide effective protection against manipulation. Cross profile locks are also available on request with a special paracentric profile. Suitable keys for concealed installation are available in different lengths from IKON.

Area of Application

Application examples for IKON cross profile security locks are central units of alarm systems, metal lockers and cabinets, IT systems, cash boxes, contact switches, measuring and recording instruments, glass display cases or safes. Each existing tumbler or Chubb lock is transformed into a high-quality security lock by the cross profile lock. Locks with a keyway radius of 18.5mm or 16.5mm and a height of 8, 10, 12mm (with 6 tumblers) or 14 or 16mm (9 tumblers) are available for any conceivable type of lock.
