

# 8145 Rim lock

Additional door locks and security devices

Rim lock without mechanical locking cylinder

Prepared for profile cylinder

IKON premium-quality locking cylinders, locks and security fittings constitute the basic equipment of secure house and apartment doors, which are complemented perfectly by IKON additional locks and security devices, not only for doors. Solid rim locks and multiple locking systems, with or without security link, provide effective additional protection as an alternative to built-in multipoint locks. IKON's know-how and decades of experience are reflected in all additional locks and security devices.

## Area of Application

Rim locks are generally fitted in house, apartment and other entrance doors in combination with locking cylinders, mortise locks and security fittings. Rim locks are available in different door hazard warning systems complying with DIN to suit individual installations. Different equipment versions of integrated locking cylinders can be selected. Several cylinders (e.g. double cylinder for the house entrance and locking cylinder for the rim bolt lock) can, of course, be ordered for a uniform locking system, and only a single key can be used for several security components.
