

8450 Security link lock case

Additional door locks and security devices

Cross bar and garage door locks

For IKON Protector bar DRS

Forcing of doors on the lock or hinge side is one of the most frequent intrusion methods. Important (and often underestimated) additional protection for doors is provided in particular by IKON cross bars and rod locks. They effectively secure the main entrance or apartment door and basement or garage doors and round off perfectly the IKON range of auxiliary locks.

Area of Application

This IKON Protector bar DRS provides security across the entire door width. The IKON Protector bar is generally used on apartment or house entrance doors offering additional security in conjunction with mortise locks, locking cylinders and security fittings. The Protector bar DRS can be rapidly mounted and adapted to suit all conventional door widths. Different door leaf widths are compensated for by an integrated adjusting mechanism. Additional vertical locking mechanisms can be optionally combined. The IKON Protector bar is designed for profile locking cylinders, enabling installation of the same locking mechanism as encountered on, for example, the main door lock.
