

9M54 Bracket- security strike plate without anchor

Security strike plates

Bracket strike plates

IKON security strike plates provide the fundamental security for main entrance doors to houses and apartments in conjunction with mortise locks, locking cylinders and security fittings and offer a high degree of security against attempts to break or lever doors open. IKON strike plates are anchored in masonry with extremely long heavy-duty rawlplugs. Solid steel drill hole guide bushes with a 45° slant are extremely resistant to extraction attempts. IKON supplies a wide range of high-quality security strike plates for different applications.

Area of Application

IKON security strike plates are anchored in the door frame and act as receptor for the latch and bolt of the mortise lock. The slanted screws on IKON strike plates provide a high degree of stability and security. The receiver bushes for the heavy-duty rawlplugs also act as drill hole guides.
