

Forensic evidence when you need it most

Your customers are only interested in their video surveillance systems after an event occurs – theft, fraud, workplace violence, litigation and employees breaking policy. If the health of your video surveillance system has not been checked, you might not be aware that your DVR has stopped recording or cameras have been moved, are out of focus, blocked or even stopped sending an image. Don't put yourself in a situation where your customer says "I paid you for this system and now I need the data, but you're telling me the video is no good. What do I need you for?"

Do not let this happen to your customers

Happy customers and recurring monthly revenue:

Rapid Eye™ Report automates the health check process of a surveillance system to provide a vital value-added billable service for your customers. Rapid Eye Report proactively helps you to identify DVR failure, camera failure, camera sabotage, out of focus cameras, blocked field of views and cameras where the field of view has been changed. Rapid Eye Report ensures your customers will have usable video when they need it most.

Dealer Benefits:

Generates Recurring Monthly Revenue

- Packaged reports enable you to deliver value-added services that your customers are willing to pay for
- Identifies billable service calls

Controls Labor Costs – Increases Margins

- Automates the extremely time-consuming process of manually checking to ensure all cameras and DVRs are functioning properly
- Reduces nonbillable service calls

Enhances Customer Loyalty and Retention

- End users paying for managed services are significantly less likely to switch dealers

Efficiency - Focus Resources

- Frees resources from manual tasks to work on other revenue-generating activities
- Automation leads to the ability to support more customers' activities

Rapid Eye™ Report
