

**HONEYWELL OMNI SERIES
HOME SECURITY**

**Protecting What You
Value Most**

Honeywell

Count on Honeywell's OMNI Series to protect what you value most...your property and the people you love.

Performance, protection and peace of mind.

It all starts with your control panel...

The control panel, usually installed in a garage or closet, is the brain of your security system. It sends and receives information and can trigger audible alarms and signal for help in an emergency. Your control panel also provides battery backup to your security system to keep you protected for a period of time in the event of a power outage.

Security made simple

Honeywell's OMNI keypads and convenient remote controls make security system operation simpler than ever. In fact, you can conveniently control your security system with the touch of a button from anywhere in or around your home.

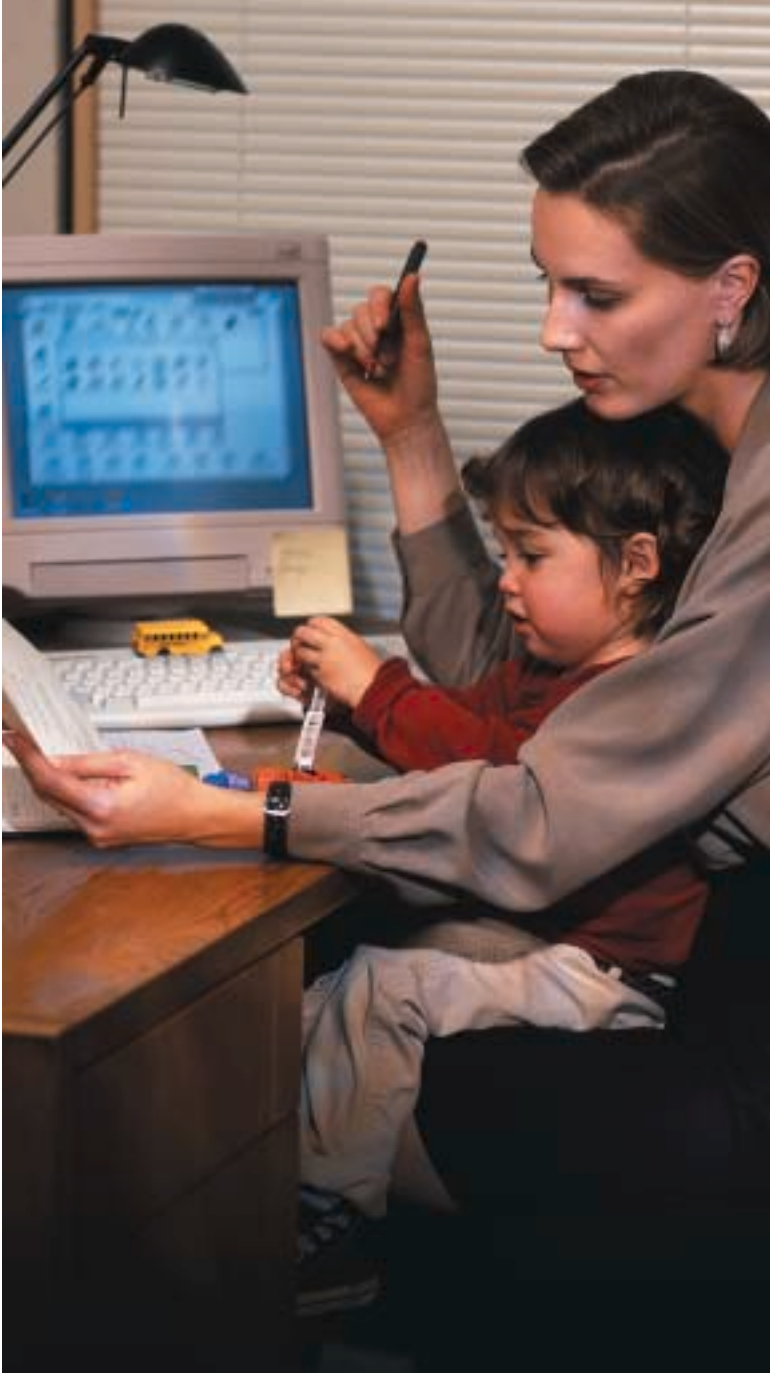

Round the clock protection

Your security system communicates with a central station, which provides 24 hour monitoring and sends for help in the event of a fire, burglary or personal emergency.

Added Protection and Value

There are a variety of convenient options that can be used in the home to enhance your system. Your installer can help you select the appropriate accessories based upon your needs, lifestyle and budget.

Customized Control

Our systems offer simple, single-button control of indoor and outdoor household lighting, garage doors and select appliances. You'll have peace of mind knowing that your home and family are safe and sound while enjoying the comforts of home control.

Door and window sensors

Our contacts, glassbreaks and shock sensors protect vulnerable entry points by sounding an alarm before an intruder enters your home.

Protection inside the home

State-of-the-art motion detectors provide you with an extra level of protection by sensing movement inside your home. Motion detectors can be bypassed to put your security system in the "STAY" mode, giving you the freedom to move throughout your home, while the perimeter remains protected.

Interior Sirens

When an intrusion, fire or emergency is detected in your home, your interior siren will sound to deter a burglar or alert the occupants to evacuate the premises.

Wireless Sensors

Sometimes it's just not possible to drill holes or run wires in your home. Our wireless sensors provide the fastest, cleanest installations while preserving the beauty of your home. Choose from a variety of door/window contacts, motion sensors and smoke and heat detectors.

Wireless Remote

Control your security system, lights, even appliances, with our convenient wireless keyfob remote. One-button operation eliminates the need to remember codes.

Wireless Panic Pendant

In an emergency, this personal panic pendant lets you send an alarm signal to your central station with the press of a single button.
